

# TooLOK

**Touch three and you'll see that TooLOK is the easiest inspection system ever. Featuring the powerful accuracy of a CIMCORE portable CMM, TooLOK makes inspection of fixtures, tools and parts a breeze.**

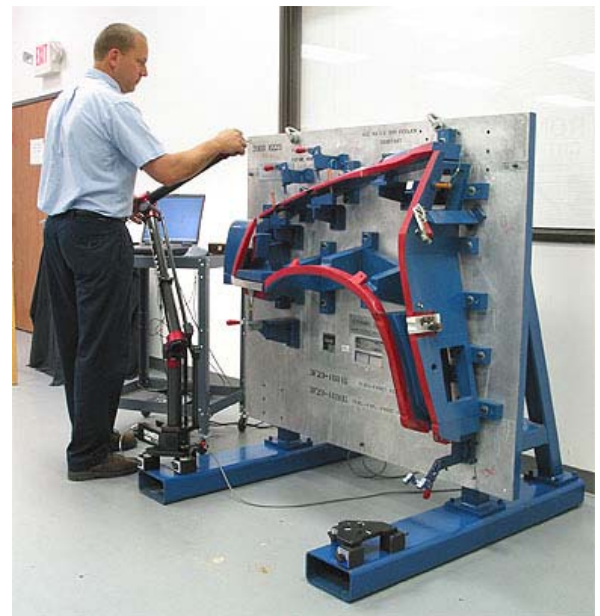

**Utilizing the world-class PowerINSPECT 3.0 software, TooLOK is an advanced add-on utility providing automatic part recognition and file management.**

## **Automates inspection**

**tasks:** An operator only needs to touch the CIMCORE CMM probe to three pre-qualified points on a fixture or part, and TooLOK then:

- . Recognizes the part.
- . Aligns (references) the tool, fixture or part.
- . Loads the CAD file and inspection routine.
- . Tells the operator where to begin measuring.

**Eliminates set-up time:** An operator can simply pick up a part from the bin, touch the three pre-qualified points and start inspecting.

**Increases throughput:** No more searching through hundreds of files and routines to ready your part for inspection! TooLOK eliminates confusion, saving you time and money.

**A simple-to-use TooLOK wizard system** allows anyone to generate a LOK to a fixture, gage, part or tool. The LOK then serves as the reference between the part and its associated files.

**Ensures consistency between operators** via inspection sequence instructions. Once the part is valued into the system, an operator can easily create an inspection sequence. Other operators then follow that sequence, ensuring reliable measuring consistency between operators.
